Relocation: Actively seeking relocation to the Netherlands, Germany, Spain or Denmark, and available at short notice. I meet the qualifying criteria for the **EU Blue Card** (software developer, ISCO 2512 shortage occupation), the Dutch **Highly Skilled Migrant** scheme, and Denmark's **Positive List** for Higher Education ("Software Backend Developer"). I have already delivered production work for two Berlin-based companies and am comfortable covering my own travel and interview logistics.

PROFILE

Software engineer with 6 years' experience building backend systems in Java and Spring Boot, with a focus on microservices, event-driven architecture and enterprise system integration. I have shipped production software in regulated environments — digital banking at Bank Albilad, legal-tech claim processing at Flightright, cyber-security tooling at XSonardive — where correctness, auditability and secure integration matter more than speed alone. I work comfortably across the stack, pairing Spring Boot services with React and Next.js front-ends, and I am equally at home extending an existing platform as building one from scratch. Happy to pick up Kotlin, which shares the JVM ecosystem I already work in daily.

TECHNICAL SKILLS

Languages	Java, C#, Python, TypeScript / JavaScript, SQL
Backend	Spring Boot, Spring Data, Spring Security, Spring Cloud, Spring MVC · REST APIs & microservices · ASP.NET Core, ASP.NET MVC, Entity Framework · Flask, FastAPI · Hibernate
Messaging	Apache Kafka, RabbitMQ, event-driven architecture, asynchronous transaction processing
Integration	Camunda BPM (workflow orchestration) · Keycloak, OAuth2, OIDC, SSO · third-party REST & SOAP integration
Frontend	React.js, Next.js, React Native (Expo), Angular
Databases	PostgreSQL, MySQL, SQL Server, MongoDB
DevOps	Docker, Jenkins, AWS, CI/CD pipelines, Git (GitHub, GitLab, Bitbucket)
Testing	JUnit, Mockito, Spring Boot Test, integration testing

EXPERIENCE

Flightright — Berlin, Germany (remote) 03/2025 – 07/2026
Full-Stack Developer

- Built and maintained customer-facing legal-tech and claim-management applications on **Next.js and Spring Boot**, serving claimants across multiple European jurisdictions.
- Designed and implemented REST APIs and microservices in Spring Boot, improving system reliability, maintainability and integration with internal and third-party services.
- Automated claim-processing business workflows using **Camunda BPM**, replacing manual operational steps with modelled, auditable processes.
- Integrated Spring Boot services with Camunda workflows and external partner APIs to deliver end-to-end process execution.
- Implemented responsive Next.js interfaces, improving application performance, SEO and user experience.
- Worked in an Agile cross-functional team with product managers, designers and QA engineers.

Bank Albilad — Riyadh, Saudi Arabia (remote) 07/2024 – 03/2025
Full-Stack Developer — Digital Banking

- Developed microservices-based backend systems in Spring Boot connecting core banking web applications to external enterprise services.
- Implemented **Kafka**-based messaging for asynchronous transaction processing, improving system reliability by **20%**.
- Secured banking API integrations using **Spring Security and OAuth2 / Keycloak**, ensuring trusted communication between Spring Boot backends and React front-ends.
- Customised full-stack banking modules — Spring Boot REST APIs and React.js dashboards — against evolving security, business and scalability requirements.
- Established unit and integration testing across Spring Boot components and React layouts, reaching **95% test coverage** and measurably improving production stability.

XSonardive — Berlin, Germany (remote)

09/2023 – 12/2023

Senior Backend Developer — Cyber Security

- Hardened a cyber-security backend platform using Spring Boot and Spring Security, mitigating identified vulnerabilities by **30%**.
- Built interactive React.js analytics dashboards wired directly to the underlying Spring Boot REST APIs, improving user experience by **25%**.

Flairstech (Cubic) — Garbutt, Australia (remote)

08/2022 – 04/2024

Backend Developer — Mass Transportation Systems

- Built and supported the backend of an enterprise mass-transportation system on **Spring Boot and Kafka**, improving real-time data-processing efficiency by **20%**.
- Delivered multiple applications across both monolithic and microservice architectures using Spring Boot, Java and Hibernate.
- Wrote extensive unit and integration tests with JUnit, Mockito and Spring Boot Test.

MedadSoft — Cairo, Egypt

03/2021 – 08/2022

Full-Stack Developer

- Supported 10+ web applications and built full-stack products from scratch on Java Spring Boot and React.js, raising client satisfaction by **40%**.
- Developed e-commerce, accounting and **ERP** solutions using Spring Boot MVC for complex workflows and React.js for admin operations, streamlining operations by **35%**.
- Implemented secure digital-banking API integrations with Spring Boot, OAuth2 and Keycloak.

AlRand Company — Cairo, Egypt

09/2020 – 01/2021

Full-Stack Developer

- Built a complete internal accounting system on a Spring Boot backend with custom React.js reporting, reducing human processing errors by **50%**.

Nandbox Software Solutions — Cairo, Egypt

05/2020 – 09/2020

Software Developer

- Developed high-concurrency Java/Spring Boot backend infrastructure for a mobile chat application, cutting client data-retrieval time by **40%**.
- Built an Android body- and face-camera application using OpenCV, achieving 90% image-processing accuracy.

SELECTED PROJECTS

- **Ostora Production Management System** — stores, production lines and design management with reporting and charting; reduced production delays by 15%.
- **Khaled Elewa Legal Consultation Platform** — case-status and session tracking for a law office, with client data storage and an admin dashboard; +30% workflow efficiency.
- **Almedad** — e-commerce platform for software services with admin dashboard, built on .NET Core and Angular; +25% sales.
- **Riyadhpac (Saudi Arabia)** — factory product catalogue with 3D models, admin panel and contact workflow; +20% customer inquiries.
- **Event Organising App** — attendance management with multi-language support and barcode generation; +35% event-management efficiency.
- **COVID-19 CT-Scan Detection** — AI model detecting COVID-19 from CT images at 98% accuracy, halving diagnosis time.
- **International Federation Website** — multi-language site with articles, posts and an admin dashboard; +40% user engagement.

EDUCATION

BSc Informatics & Computer Science, major in Artificial Intelligence — The British University in Egypt

2018 – 2022

CERTIFICATES & LANGUAGES

Certificates AWS Cloud Practitioner Essentials · Software Development Life Cycle (SDLC) · Critical Thinking · Problem Solving · Improving Your Thinking · Crafting Questions to Make Better Decisions

Languages English — fluent (professional working proficiency) · Arabic — native
