Relocation: Actively seeking relocation across the EU and Asia. For EU roles: as a software developer (ISCO 2512, a recognised shortage occupation across the EU) I meet the qualifying criteria for the EU Blue Card, including the reduced salary threshold that applies to ICT specialists. I have already delivered production work remotely for employers in multiple regions and am comfortable covering my own travel and interview logistics.

PROFILE

Software engineer with 6 years' experience building backend systems in **Java (8, 17, 21) and Spring Boot**, with a focus on microservices, event-driven architecture and enterprise system integration. I have shipped production software in regulated environments — digital banking at Bank Albilad, legal-tech claim processing at Flightright, cyber-security tooling at XSonardive — where correctness, auditability and secure integration matter more than speed alone. I work **test-first with JUnit and Mockito**, and run, deploy and debug my services on **Linux**. I work comfortably across the stack, pairing Spring Boot services with **React and Next.js** front-ends, and I am equally at home extending an existing platform as building one from scratch. Happy to pick up Kotlin, which shares the JVM ecosystem I already work in daily.

TECHNICAL SKILLS

Languages	Java 8 / 17 / 21, C#, Python, TypeScript / JavaScript, SQL
Backend	Spring Boot, Spring Data, Spring Security, Spring Cloud, Spring MVC · REST APIs & microservices · HTTP connection pooling & client tuning (pooled connection managers, keep-alive, timeouts) · ASP.NET Core, ASP.NET MVC, Entity Framework · Flask, FastAPI · Hibernate
Messaging	Apache Kafka, RabbitMQ, event-driven architecture, asynchronous transaction processing
Workflow	Camunda BPM / BPMN 2.0 — process modelling, workflow orchestration, service tasks, Spring Boot integration
Reporting	JasperReports / Jaspersoft Studio — templated PDF & document generation from Java services
Integration	Keycloak, OAuth2, OIDC, SSO · third-party REST & SOAP integration
Frontend	React.js, Next.js, React Native (Expo), Angular
Databases	PostgreSQL, MySQL, SQL Server, MongoDB
DevOps	Linux / Unix (shell, deployment, log analysis) · Docker, Jenkins, AWS, CI/CD pipelines, Git (GitHub, GitLab, Bitbucket)
Testing	TDD (test-driven development) · JUnit, Mockito, Spring Boot Test, unit & integration testing
Practices	Agile / Scrum · BPMN process modelling · code review · cross-functional collaboration

EXPERIENCE

Bank Albilad — Riyadh, Saudi Arabia (remote) <i>Full-Stack Developer — Digital Banking</i>	07/2026 – Present
Rejoined the digital banking team, building Spring Boot microservices and React.js modules that integrate core banking with external enterprise services.	
Flightright — Berlin, Germany (remote) <i>Full-Stack Developer</i>	03/2025 – 07/2026
- Built and maintained customer-facing legal-tech and claim-management applications on Next.js and Spring Boot, serving claimants across multiple European jurisdictions. - Designed and implemented REST APIs and microservices in Java 17 and Spring Boot 3, improving system reliability, maintainability and integration with internal and third-party services. - Automated claim-processing business workflows using Camunda BPM, replacing manual operational steps with modelled, auditable processes. - Integrated Spring Boot services with Camunda workflows and external partner APIs to deliver end-to-end process execution. - Ran services on Linux in Docker containers across environments, handling deployment, log analysis and shell-level debugging. - Implemented responsive Next.js interfaces, improving application performance, SEO and user experience. - Worked in an Agile cross-functional team with product managers, designers and QA engineers.	
Bank Albilad — Riyadh, Saudi Arabia (remote) <i>Full-Stack Developer — Digital Banking</i>	07/2024 – 03/2025

- Developed microservices-based backend systems in Spring Boot connecting core banking web applications to external enterprise services.
- Implemented Kafka-based messaging for asynchronous transaction processing, improving system reliability by 20%.
- Tuned **pooled HTTP clients** for outbound enterprise integrations — max connections per route, keep-alive and connect/read timeouts — keeping third-party core-banking calls stable under load.
- Secured banking API integrations using Spring Security and OAuth2 / Keycloak, ensuring trusted communication between Spring Boot backends and React front-ends.
- Customised full-stack banking modules — Spring Boot REST APIs and React.js dashboards — against evolving security, business and scalability requirements.
- Worked **test-first (TDD)** with JUnit and Mockito across Spring Boot components and React layouts, reaching 95% test coverage and measurably improving production stability.

Flairstech (Cubic) — Townsville, Australia (remote)

08/2022 – 04/2024

Backend Developer — Mass Transportation Systems

- Built and supported the backend of an enterprise mass-transportation system on Spring Boot and Kafka, improving real-time data-processing efficiency by 20%.
- Delivered multiple applications across both monolithic and microservice architectures using Spring Boot, Java and Hibernate.
- Practised **TDD**, writing JUnit, Mockito and Spring Boot Test suites ahead of implementation.

XSonardive — Berlin, Germany (remote)

09/2023 – 12/2023

Senior Backend Developer — Cyber Security (concurrent contract alongside Flairstech)

- Hardened a cyber-security backend platform using Spring Boot and Spring Security, mitigating identified vulnerabilities by 30%.
- Built interactive React.js analytics dashboards wired directly to the underlying Spring Boot REST APIs, giving analysts direct visibility of platform telemetry.

MedadSoft — Cairo, Egypt

03/2021 – 08/2022

Full-Stack Developer

- Supported 10+ web applications and built full-stack products from scratch on Java Spring Boot and React.js, across e-commerce, accounting and ERP domains.
- Developed e-commerce, accounting and ERP solutions using Spring Boot MVC for complex workflows and React.js for admin operations, replacing manual back-office processes.
- Implemented secure digital-banking API integrations with Spring Boot, OAuth2 and Keycloak.

AlRand Company — Cairo, Egypt

09/2020 – 01/2021

Full-Stack Developer

- Built a complete internal accounting system on a Spring Boot backend with custom React.js reporting, reducing human processing errors by 50%.

Nandbox Software Solutions — Cairo, Egypt

05/2020 – 09/2020

Software Developer

- Developed high-concurrency Java/Spring Boot backend infrastructure for a mobile chat application, cutting client data-retrieval time by 40%.
- Built an Android body- and face-camera application using OpenCV, achieving 90% image-processing accuracy.

SELECTED PROJECTS

- **Nadwa: Conversation Games** (iOS, React Native / Expo) — social conversation game for 2–12 players joining by code or link, 17+ curated decks, bilingual EN/AR. App Store
- **Return Me Back** (iOS, React Native / Expo) — goal-focus companion with configurable nudges, background focus timers, quiet hours and long-range history. App Store
- **Khaled Elewa Legal Consultation Platform** — case-status and session tracking with client data storage and an admin dashboard. khalidelewa.com
- **Riyadhpac Factory Website** — product showcase for a Saudi packaging factory with specifications, interactive 3D models, an admin panel and a contact form. riyadhpac.com
- **Ostora Production Management System** — production-line, inventory and design management with reporting and charting; cut production delays by 15%.
- **Internal Accounting & ERP Platforms** — accounting, invoicing and stock modules on Spring Boot with React reporting front-ends, delivered for multiple SME clients.
- **Almedad** — e-commerce platform with admin dashboard, built on .NET Core and Angular.

- **COVID-19 CT-Scan Detection** — deep-learning model classifying COVID-19 from CT imaging at 98% accuracy (BSc AI major).

EDUCATION

BSc Informatics & Computer Science — major in Artificial Intelligence

2018 – 2022

London South Bank University, United Kingdom & The British University in Egypt — dual award (UK degree conferred by LSBU)

CERTIFICATES & LANGUAGES

Certificates AWS Cloud Practitioner Essentials · Software Development Life Cycle (SDLC)

Languages English — fluent (professional working proficiency) · Arabic — native
